History AutoCAD was originally developed by Corel in Calgary, Alberta, Canada. Corel was bought by Autodesk in 1994. It was first released on April 1, 1989. From 1991 to 1997, Autodesk had a variety of development teams for AutoCAD at different times. From 1997 to 2000, the company had just the Productivity Tools Group, which made AutoCAD productivity tools, as well as Autodesk Motion Builder, which developed motion building applications. Autodesk split the Productivity Tools Group into two divisions; PowerPlant and PowerCAM, for AutoCAD model management and visualization applications. AutoCAD was originally written in Turbo Pascal for the DOS platform. In 1996, Visual Basic.NET (VB.NET) was added. In the 2000s, as the PC market declined, Autodesk switched development from.NET to Java, due to the Microsoft Win32 platform's lower popularity. Autodesk had also previously switched from the command-line, batch-oriented approach of Turbo Pascal to the newer object-oriented approach of Java. Autodesk also wanted to reduce the memory and processing overhead of the programming language. In 2005, Autodesk released a new version of AutoCAD that is no longer Java-based, but instead uses a Microsoft.NET programming environment. Autodesk continued to use Java for other applications, such as AutoCAD Architect, and retained VB.NET as the programming language for AutoCAD. During the late 2000s, Autodesk developed, and released, a 64-bit version of AutoCAD for Windows. The company also discontinued support for 32-bit versions of AutoCAD on Windows. The 32-bit version was deprecated in 2007. In 2010, Autodesk moved AutoCAD and related products to a new product code, "15", which was to be a transition between 15 and "20" which became the code for 2016 products. In 2012, Autodesk began to develop its next major release of AutoCAD, codenamed "18". New features in AutoCAD 2017 AutoCAD 2017 features a new C++ class library, more intuitive user interface, a faster user experience, and enhanced animation capabilities. Q: TFS Get Latest on Feature Folder I'm creating a Team Build for our TFS 2010 environment, and one of the Tasks is to Get the latest from a feature folder on a particular server. I'm getting an error "TF14051: You must use the value of the Source attribute for GetVersion command." Here's what I have: Thanks for your help! A: The bug is fixed in V2 of the powertools pack. A: If it's not broken, it's not fixed. We've been using the power tools (with a basic skill set) to manage a team of about 30 developers and using that as our primary tool. We've worked on dozens of builds where this was used successfully and even one or two where the version was made available. We've gotten it working for some things, but the whole process is a pain. The Version Number always changes when you check it out of TFS, but doesn't get updated properly (it doesn't even get updated with our latest version number - which is nice - it actually returns
