Watch download online or download the Golmaal Returns movie for free. Content providers including internet search engines, such as GOOGLE, YANDEX, YAHOO!, MSN, and others, provide mechanisms for searching for content on their services. These mechanisms typically operate by providing a web server that hosts the search service, and by developing search queries that a user submits to the server. The search queries, and possibly results that are returned to the user, are stored. On demand, the content provider can provide the stored search queries, and possibly results, to the user. It is known to provide a client based search engine. A search engine operates to process search queries that are sent by a user. This may occur as a result of a user operating a network device, such as a personal computer, telephone, PDA, or other communication device. The user submits a search query, i.e., a term, such as 'news' or 'sports', to the search engine as part of a web page that is received by the network device. The search engine
