Raster Prime[REMIX] is the remixed version of the classic game Raster Prime(also known as Raster Action or DieRast) in which the player dodges in order to shoot the ships they can see using a destructive laser.The game is played in the screens of the punch-out screens of a cathode-ray tube TV in which the players must dodge the ships by moving up and down and left and right, preferably on a diagonal path in order to boost their lasers while trying to survive, coordinating and ordering different attacks and using the laser bullets to destroy the ships.

Raster Prime[REMIX] includes some innovative features: a new map in 16.6 m per side, fifteen ships, bombs, bullets, twenty bonus points awarded for destroying the pyramid made of shields at

the bottom of the screen, each torpedo or bomb can destroy a number of shields instead of a limited amount. When a ship is destroyed another ship appears on the right of the screen, if all ships have been destroyed, the game ends.

Wanderlust: Travel Stories is an odd hybrid of a game, combining excellent pixel art with a collection of simple interactive storybooks. The premise is simple enough: you play as a famous travel writer who is on a road trip, going from one adventure to the next. Along the way, you'll collect objects that will add to the narrative in your wordt, which is done either by clicking on or tapping on the text. There are a lot of these text objects that will add up to a whole narrative, and there are a lot of things for you to do while on the road, from searching for items to solving puzzles. It's a game that allows you to play with these words, and to the text objects as interactive

objects. You'll have two or three chapters as part of your walk on the road, with each chapter being a different story. The path between the chapters is a mixture of point-to-point driving sections and puzzle solving sections. The driving sections can either be exploration-based, or warping from area to area, based on where you happen to be in the book. The puzzles are simple, and may contain details from the lore of the book, like how to get keys to open a door. When you're not driving, you can head into a room and interact with the objects found there, which will trigger story text or offer side-quests. The side quests tend to involve finding an item for your wordt, or finding a key to open a door, and they do a good job of being wholly unique each time. It's hard to really comment on the production values of a text-based game, but Wanderlust has an extremely well-written narrative and one that rarely feels too long-winded. The art style fits the tone of the game very well, and the sound effects were all as expected for a text-based game. At times, Wanderlust: Travel Stories can be a bit underwhelming, but that's the nature of this particular genre. Still, overall it's one of the most text-heavy video game I've played in a while.9/10 Adventure GamersWanderlust: Travel Stories is an

unusual and bold concept of a game based on the literature of the road. The courage of the artists, who created a game consisting mostly of text, deserves admiration. And recognition, too, because Wanderlust is simply a really good game.9/10 Game ZoneRPG Wanderlust is by no means what you would normally

What's new:

& Collector's Edition Is it enough to say, "It's out, and you should buy it"? After all, the latest iteration in the Art of series of fan-books for sci-fi and fantasy franchises isn't shaping up to be much of an art book. Here's hoping for better. With the Art of the Thor franchise we got a nice, big fold-out poster of the cover designs. With the Art of the Star Trek franchise, I got... a supernarrow poster, listing the poster dimensions, with a sketch (well, more of a rough drawing) and dated artwork. And with the Art of the Avatar franchise, I got some more pictures. And then I bought them all. And it's been great. Oh, the negative, The Art of the Thor movies? Forget I said anything about it. The Art of the Thor Movies? Long story. The Art of Avatar, then, and with it the comic, came and went, with a nifty fold-out poster as it did. The Art of the Star Trek, Battlestar Galactica and Dark Knight Rises franchises have all gone to print, with the latter of those pair (that would be Rises, likely because the Dark Knight movies are so boring) taking up the most space in the market. (As an aside, if you're ready for the nerdage to get going, Dark Knight Rises is pretty cool. Chris Nolan wrote and directed. I will watch it. Every time I cry about the ending, I discover I'm actually watching an ending and not bawling, haha.) But something about this time in the life of a franchise has settled in, a sense that there is something special about having a character art book that you can hold and look at in the store. And not just hold- that they can also buy. And not

just buy- that they can do without looking at the whole thing. They can buy a copy that they can pull down from the shelf and put on the coffee table. And they won't necessarily have to engage in a little tribal shit at having in their collection anything more than half-a-dozen books that cower down under the scrutiny of intellectualism. The art book is the perfect format for the thing you might call, deep down, your aesthetically-weak pirate/king/p

An insider at an underground weapons factory in Laos has revealed a series of exploits that have consistently weakened the US's defenses against the growing power of China's armed forces. Both the US military and the US government have been aware of an increasing trend in China's air and naval power, and at one point they even sought to warn the American people of the threat that they faced. The US has sought to build up defenses against China in the region, but the US military has repeatedly found themselves fighting outnumbered and outgunned. A series of apparent spy points have been found in the South China Sea, with equipment and data transferred to China, as well as the use of a US-based network in Singapore to ferry data out of the country. It has also been revealed that the US Army has had to divert equipment to

help counter this growing threat. The insider has now revealed details of a series of sabotages that have undermined the effectiveness of US air defenses. Speaking to CCTV America, he said, "These government officials need to take action. The US needs to send their experts to the South China Sea and find the problem. "For example, if you look at the pictures released by [the Chinese Navy]...they show that the planes are already outside the [Foal Eagle] zone. "China is tapping into our military's communication lines, stealing military equipment and then leaving
