Aeloren Tactics is an RPG set in Tetsyunia. It explores the internal feelings, beliefs, and superstitions of the main character Clairena. The story is a tragedy built around the interactions of many characters in the game world. Many characters are complex, tortured souls. As the story progresses you will find your opinions change of many of the characters as you progress. There are many different ways to interact with characters and complete quests in Aeloren Tactics. From Roleplaying, crafting, fighting, etc. You can choose to befriend, steal from, or kill. You will choose which path to take, each with their own pros and cons. Although I do not recommend I can appreciate the many benefits of one character over another. It provides many challenges to the player and gives them a reason to keep playing. Aeloren Tactics has a faction system with the characters of Clairena and her band. Each has their own strengths and weaknesses and are quite unique in their own right. Although at first it does seem overwhelming there are many choices to choose from as the story progresses. Remember, you only have to play this one character. Each of the other party members can only appear on one map. [Gameplay] -While playing Aeloren Tactics, players will be asked to engage in a battle against another party. One can only carry a team of three, so whether you choose a melee character, ranged characters, or even archer characters. Each will have their own advantages over the others. -Players will be given an objective to complete within a set time limit. -Characters will be presented to the player in a random order. -Being a random order, all of the party members are provided in plenty. It is possible to play with only 1 character if desired. -Aeloren Tactics has many unique features. -One of them being Trial and Death Modes. -Clairena will encounter both while traveling her perilous path. Trial Mode will provide the player with a character whose armor is already equipped, they'll fight in a team and have a chance to rescue the party or are tried and slain. Death Mode will make the character bleed out or suffer from harsh diseases. -Each character

Features Key:

- Multiple maps: The map list is the biggest list by far, with plenty of double-sized maps being the standard for De-Con.
- Free-roam map: Pick a map from the map list and free-roam to your heart's desire. This feature is the basis for team-vampire matches, also.
- HDTV support: High definition and 3D support - while the graphics do look a tad outdated, there is still some fun to be had.
- Game enhancements: Stuff like pre-defined pauses and settings. The ability to switch between non-ops and ops versions makes it possible to do map-design tweaks for each class of players.

Endorsements "CRYPTIDS is certainly not a game for the faint of heart. It is a relentless action platformer with minimalistic gameplay that requires you to not only be alert but also extremely observant and brave. Cryptids is unlike many of its type where the skill aspect is proportionally matched with the challenge. Developers have managed to balance the game such that if you die you will not be deprived of the gameplay, but your progress will stall. This is something that is rarely achieved in action platformer genres."8.5/10 – IGN

What's new in The Light Of Summer Official Artbook:

DMD Branefold is a creative and technological prototype developed by DMD Robotics in collaboration with Space Rogue. It is a micro-electromechanical machine based on Sarcophagus technology developed in the mid-90s. The devices is composed of three parts: a Branefold separated from a motherboard by a polycarbonate glass; a camera, a laser detector, light and display system; and two motors. This microengineering contruct built with an open-source SDK but is unable to read QR codes because some inefficiencies arise with the support sockets on the Branefold and its lack of possibility of learning. The purpose of Branefold is to implement new skills in robotics developed around this technological platform. The code that drives the machine have been developed jointly by Freelance developer Carlos Lozano and one of the protagonists of the hackathon, Pochetes, André Bizos. The philosophy of this platform is to show that small programming teams can create innovative functional devices at the same pace as the big companies but with more freedom and under conditions of greater efficiency. History Branefold was designed in 2003, before the development of the Branefold platform, it was a military prototype that was built with the support of the Advanced Research and Development Center (CERCA-INNOVA), the robotics center at the University of Palma and the University of Coimbra. But before Branefold, the first try to adapt the concept of Sarcophagus appeared in 1999, through Frank Csemore's SarcoBot project. The difference with Branefold is the latter is a reinterpretation of the concept of Sarcophagus after incorporating several recent technologies including the latest developments in 3D printing and wireless sensors. Funding of Branefold Proyect by the Department of Information and Communication Technologies of the Innovation Circle Delegacion de Govern and Decision of the Ministry of Public Works and Transport. Funding by the European project SMILE (SMalable fIgures in LImited resources IoT environments). Features Branefold has the following specific characteristics: Use of polycarbonate as a protective support. Use of SARCOPHAGE technology to create the Branefold. The implementation of several technologies, such as particle science, rapid prototyping and 3D printing that will be used as the method of manufacturing iterations of the machine and setting
