A guide to keeping your Vista Premium / Professional workstation from eating itself. by Steve "Stormy" Wanyk with downloads and. During the installation, the user is given the option to select which edition of Windows. Windows®.Q: How to get a list of tables of a mysql db in php? is there any way to get a list of mysql tables of an exact database in php? Example : mysql> SHOW TABLES FROM dbname; +-----+ | Tables_in_dbname | +-----+ If there is not, is there any alternative? I cannot use the command line to determine the tables list I don't have the administrative rights to the db, in fact I am trying to identify the DB from a function which have a list of DBs to choose from, because i have a list of DBs in the DB name, it uses some queries to see whether the DB is already in use or not and that's why i need to know which db's there are currently used so i can do that in a loop for all of them. A: You can use mysqldumpslow --help for the format and options it accepts Example: mysqldumpslow --all > /tmp/databases.sql and then grep -v '^--.*?\$' /tmp/databases.sql | grep -v '^#' > /tmp/tables.sql or cut -f1 /tmp/databases.sql | sort -u | uniq | grep -v '^#' > /tmp/tables.sql and read through /tmp/tables.sql to see which DBs are listed # Test the "bump" function. from __future__ import print_function
