Time course of expression of inducible nitric oxide synthase in human glomeruli. To study the expression of inducible nitric oxide synthase (iNOS) in human glomeruli. Glomeruli were obtained from 4 patients at various time points up to 28 days after the onset of disease and stained for iNOS by indirect immunohistochemistry. Glomeruli harvested from different time points showed a wide range of staining of iNOS in the lamina rara interna (l.r.i.) and capillary wall. Glomeruli from patients with different prognoses showed a wide range of staining of iNOS in the l.r.i., and the differences in staining intensity of iNOS in the capillary wall were less. Staining for iNOS is found in the glomeruli of patients with various grades of proteinuria and in various stages of the disease and correlates with the prognosis of the c6a93da74d
