An important topic for almost every software provider is its market penetration rates. More interesting is how much a product's potential market share is actually actually increased as a result of a new feature or enhanced user experience. For example, an analyst predicts Apple will bump up its market share by as much as 1% when iPhone sales go up by 3 million thanks to the new camera feature (called Live Photo, although there is currently no indication this will be called Live Photo when Apple actually launches it). New features are also not as much as we all hoped for, as any of us would expect them to be if a software company were to double or triple the number of its users. If a company made a lot of noise about the fact that it has doubled or tripled the number of its users, it would be easy to deduce that something unsaid had been found. Many products or features are launched. However, most of them do not actually lead to any improvement in market share. By abbreviating the name of the product to "Lightroom" or "Lightroom Classic" or simply "Lightroom", people expect more from it than what it can actually do for them. So, the Windows compatibility of the full Photoshop CS6 line looks good and fast, with support for all the latest 64-bit Windows OS upgrades. Although Photoshop CS6 requires Windows 7 or later, only Photoshop Elements CS6 is not compatible with Windows 8 or 8.1; getting Photoshop up and running is a breeze. Unless you're a total MacBook or iMac addict, it's really not wise to skip Windows.
