I'm happy with the fact that Catalogues work as well as they have for the past few years. It eliminates any need to use the Search bar, which can be a nuisance. These older versions have unlikely something like the Find command, which may be out of the question, but a backward Search of sorts is still possible. The new version improves the ability of the user, in my opinion, but Adobe could have made it just a bit easier. While working in Lightroom, the app still has the same features as those in version 4. However, there are some welcome changes, as well. For instance, you no longer need a dedicated button for opening the new Import From Street View tool. You simply click on the area you want and drag to a location on the image. You also can still use the "Browser" features and browse images on a folder-by-folder basis. Layers are back...sort of. You can still group (or "parent") layers together, like you did in the past. However, a new Set Parent To Layer feature is available, which lets you change the parent of a selected layer, if you want. As always, you can "move" a group of layers to a different location on the canvas, but you can no longer copy that process to a new location. I've been an Adobe member for many years. I praised its core programs, but I've had many complaints about Photoshop. It seems that the feature update is not that great, and a It is surely unusable in macOS Catalina. As a member, In order to keep my premium membership fee, I had to upgrade my license to the newest version (Adobe Photoshop 2018), and now it doesn't even work properly with macOS Catalina.

In terms of performance, the first thing you should do is increase the swap space. If your memory is too small, Photoshop may struggle to work efficiently and your computer will become sluggish and unresponsive. Thankfully, this is something you can easily do and a good, basic hard drive is recommended. Modern computers already come with a decent hard drive by default and the swap space is your backup. If you've used it before, you'll also know that it is most easily extended and shrunk. In fact, I'll recommend that you do this, prior to installing a new hard drive and leaving it in the same location. This will speed things up further.
